# Design document

Wireframe

Color scheme and fonts

Color scheme: white and gray
Font: Inter

Layout

Index page layout inspired by wordpress themes
Nav bar and layout inspired by vercel and netlify
Warning inspired by quasar framework alert component

Implementation and changes

- Move the sidebar out of the content section so when the sidebar button is checked it doesn't affect the content section layout.
- On mobile site move dropdown menu over side bar because lack of javascript exponentially increase the complexity of detecting if the sidebar button is checked

Testing

Using vscode [live server](#) extension with edge debugger tool and deploy using bytecode to [url](#).
